Declaration

Stance Agriculture Pty Ltd hereby makes this declaration subject to the conditions and procedures stated and warranted by our Papua New Guinea supplier in their Cattle Care Australia Accreditation correspondence dated 11th August and 22nd December for CopraStance Meal sold loaded in containers F.O.B ex PNG.

The CopraStance Meal is in no way treated by Stance Agriculture Pty Ltd after receipt into its care from our shipper/supplier. The CopraStance Meal is passed from the vendor's care into the client's care in the same condition as the CopraStance Meal is received from our PNG supplier. Stance Agriculture Pty Ltd to the best of its knowledge believes that CopraStance Meal supplied to its clients is fit for the intended use of feeding livestock at the time of transfer of ownership of the feedstuff.

The Papua New Guinea supplier states in their Cattle Care Accreditation correspondence for CopraStance Meal:

"We are pleased to advise that crude coconut oil and copra meal produced in PNG is free of any chemical input. The raw materials used have not been genetically modified nor have any chemicals been added to the finished products. The farmers producing the raw materials are all subsistence based and chemical fertilisation is beyond their reach in coconut growing. The copra meal does not contain any materials that are prohibited for use as feeds for ruminant livestock.

The extraction of oil from the copra is a mechanical one, where the copra is dried, milled and then subjected to screw pressing at temperatures greater than 120 degrees C. The coconut oil milling process is purely mechanical, using steam driven Anderson's expeller presses, with no chemical extraction process. The resulting copra meal is therefore a byproduct of a non chemical process from start to finish. Our main products are sold for consumption into high quality cooking oils and edible products. The buyers in Europe subject all their raw materials to intensive screening for impurities and harmful products. It is therefore reasonable to assume that as copra meal is a byproduct of the same process it will be entirely safe from contamination as it leaves our factory".

Quantity and name of plant or plant products

CopraStance Meal is imported into Australia in accordance with the AQIS requirements for importation of biological materials. All shipments of CopraStance Meal are physically inspected by an AQIS officer and certified to be free of contaminants, live insects and weed seeds.

Product: CopraStance Meal

Production process

CopraStance Meal is produced from the dry meal byproduct from coconut oil extraction from coconuts. CopraStance Meal is sourced from Pacific Island nations.

Coconuts are harvested manually from the plantation and dehusked in the field. The copra cup is removed and mechanically dried, prior to processing to remove the coconut oil. The oil extraction process involves heating with steam, grinding, and extrusion through Anderson's expeller presses. This is a mechanical process, and no chemicals are added. The resultant copra meal is dried and hammer milled prior to packing in containers for export. The copra meal is exposed to temperatures greater than 120 degrees C, which denatures some of the protein and increases the nutritional value.

Composition (dry matter basis)

Analysis		Amino acid profiles (g/kg DM)	
Moisture:	10 %	Arginine	25
Min. Crude Protein:	22 %	Asparagine	15.6
Acid Detergent Fibre:	33 %	Glutamine	26.2
Fat:	8 %	Isoleucine	6.2
Metabolisable Energy (ruminants):	13.5MJ/kg DM	Lysine	5.4
Digestible Energy:	15.0MJ/kg DM	Methionine	3.9
Starch:	1 %	Fatty acid profiles (%)	
Ash:	5 %	Lauric	40
Lignin:	9 %	Myristic	20
		Palmitic	13
		Oleic	12

Key benefits

- ▶ CopraStance stored in a cool, dry place has an excellent shelf life.
- ▶ CopraStance usually contains 8-10% coconut oil. Unlike most vegetable oils, coconut oil is saturated, which reduces the likelihood of the meal becoming rancid.
- ▶ CopraStance does not contain mycotoxins, pesticides or caffeine.
- ▶ CopraStance does not contain weed seeds or foreign organic materials.

Packaging

CopraStance meal is packed in 30kg polypropylene bags.

Uses: Cattle

CopraStance meal is a nutritional supplement for all classes of cattle. CopraStance is a **true supplement** because it provides the correct balance of protein/energy (13g digestible protein/MJ ME) and increases feed intake and animal production.

Withholding periods: Cattle

As stated previously, the copra in CopraStance is not chemically treated in any way by Stance Agriculture Pty Ltd and as such no minimum withholding period is associated with it.

Country of Origin

Papua New Guinea.
